

This survey aims at evaluating the naturalness of the given images. There are **500** images in the folder “session\_x” to be scored. Please score the naturalness of each on a scale from “**1**”(very **bad**) to “**4**”(very **good**). Details:

- “4” denotes that the image appears to have been captured in a natural setting and appears to be a true-to-life representation of nature.
- “3” denotes that the image may not be entirely natural, but it could still have been captured in nature.
- “2” denotes that the image is somewhat unnatural and would be difficult to capture in nature.
- “1” denotes that the image appears to be highly unnatural and cannot be considered a representation of nature.

5 seconds are suggested for scoring each image. Therefore, the suggested total time cost for the whole survey would be one hour including viewing time and recording time.

You are required to record your scores in the Excel file. The column “**id**” denotes the image name. And you need to fill your score corresponding to the image into the column “**score**”.

After finishing the survey, please send an email to [cheehingchung@gmail.com](mailto:cheehingchung@gmail.com) (for **collecting results only**) with your unique **Prolific ID** and the **session id** (e.g., session\_2) in the main body, and the **Excel file** as the attachment. And you will receive a reply email with the Completion code correlating to your session. The Prolific project will be finished after entering the Completion code.

If you have any questions, please feel free to send an email to [smoncaff@outlook.com](mailto:smoncaff@outlook.com) (for **Q&A only**) for support.
